CAREER OBJECTIVE

Aspiring to leverage my skills in computer science and engineering, with a focus on Artificial Intelligence and Machine Learning, to contribute effectively to innovative projects, drive business value, and enhance personal and professional growth in a challenging role.

EDUCATION

Presidency University Bengaluru	Feb 2022 - July 2025
Bachelors of Technology in Computer Science and Engineering (AI and ML)	CGPA: 6.6/10
Sahyadri Polytechnic Thirthahalli	Jan 2019 - Sep 2021
Diploma in Computer Science and Engineering	Percentage: 61.2

TECHNICAL SKILLS

- Programming Languages: Python, C, C#
- Web Development: HTML, CSS, JavaScript, ASP.NET
- Frameworks Tools: .NET Framework, Node.js, Firebase Design
- AI/ML: LLMs, REST APIs, RAG, MCP
- Platforms Systems: Kali Linux
- Database Management: MySQL

EXPERIENCES

SLK SOFTWARE

AI/ML - Trainee

- Applied machine learning techniques for predictive analysis and classification while building end-to-end ML workflows covering model training, evaluation, and deployment.
- Gained hands-on experience with AI agents, MCP, and Retrieval-Augmented Generation (RAG), integrating them into intelligent systems for scalable and real-world applications.

PROJECTS

Travel Itinerary Generation using Generative AI

- Developed a Generative AI-based system using the Gemini API to create personalized travel itineraries based on user preferences like destination, budget, and trip duration.
- Integrated multiple data sources, including the Gemini API, Google Maps and tourist attractions, with a front-end built using ReactJS, HTML, CSS, and Vite, to provide real-time recommendations.

Autonomous Document Intelligence Platform (IDP)

- Built a multi-agent AI system to process text, image, audio, and video files, transforming unstructured content into structured, queryable intelligence.
- Implemented an API-first architecture with FastAPI and a modern Next.js frontend, enabling asynchronous document processing and relationship mapping through a document graph.

Insurance Claim Fraud Analysis Dashboard

- Built an intelligent insurance claim analysis dashboard to estimate fraud probability by performing semantic search between FIR documents and claim request summaries using a Mini LLM (L6), along with keyword matching to flag suspicious patterns.
- Integrated a chatbot assistant powered by Sonar Pro (Perplexity) for claim-related Q&A and additional detail collection, routing high-risk claims with contextual insights to the officer dashboard for approve/reject decision-making.

CERTIFICATIONS

- **AWS-Amazon** Introduction to Machine Learning, Getting Started with DevOps
- **Great Learning** Data Science foundations
- **Udemy** : Relational Database Design, Introduction to DevOps, Java, JavaScript & JQuery Basics, SOLID Principles OOP & Architecture.

TRAININGS

Implant Training in Web Development at Innovant IT Solutions, Shivamogga

Gained hands-on experience in web development, including front-end and back-end technologies like HTML, CSS, JavaScript. Worked on real-world projects to enhance technical and problem-solving skills.

HACKATHONS AND COMPETITIONS

Codethon x IIIT Bangalore Organized by Canara Bank at IIIT Bangalore.

Collaborated in a team to develop a project that facilitates loans for businesses and thin-file employees using advanced algorithms for creditworthiness assessment. Demonstrated skills in financial technology innovation and teamwork.

HackToFuture x EDGK Pvt Ltd held at ST.Jospeh Engineering College.

Built a platform that uses a multi-agent AI architecture to convert unstructured documents and media into structured, actionable insights.
